MODULE 1 · OPERATIONAL FRAMEWORK

The Meta Ads Campaign Planner Workbook

Step-by-Step Operating System: TOF / MOF / BOF Architecture & Decision Framework

CORE PRINCIPLE: ADS NEVER FAIL IN ADS MANAGER

A campaign never fails because of an algorithm button. It fails in one of four foundational pillars:
1. Unit Economics: Selling at negative margin after COGS, shipping, and payment gateway fees.
2. Creative Angle: Hook fails to arrest attention in the first 1.5 seconds of user scrolling.
3. Offer Resonance: Value proposition lacks contrast against commodity competitors.
4. Post-Click Velocity: Landing page load friction or checkout leakages kill intent.

Full-Funnel Campaign Architecture (The 70/20/10 Rule)

TOP OF FUNNEL (TOF) — 70% Budget

Audience: Broad / Advantage+ / Non-Engaged | Objective: Low-friction hook, problem agitation & first interaction.
Creatives: 3-angle concept tests (Video hooks, carousels, before/after).

MIDDLE OF FUNNEL (MOF) — 20% Budget

Audience: 30-Day Video Viewers, IG/FB Engagers, Content Consumers | Objective: Deeper value stack, founder perspective & mechanism bre
Creatives: Product breakdowns, objection handlers, social proof stories.

BOTTOM OF FUNNEL (BOF) — 10% Budget

Audience: 7-Day Add to Cart, Initiate Checkout, Page Viewers | Objective: Remove friction, urgency triggers, FAQs & risk-reversal.
Creatives: Direct comparison tables, money-back guarantee, customer reviews.

Pre-Launch Campaign Setup Checklist:

- [ ] CAPI (Conversions API) verified with >8.0 Event Quality Score in Meta Events Manager
- [ ] Conversion events prioritized: Purchase > InitiateCheckout > ViewContent
- [ ] Advantage Campaign Budget (CBO) enabled with minimum 3 diverse ad formats
- [ ] UTM parameter tracking string appended to every ad URL: utm_source=meta&utm_medium=paid

MODULE 2 · CREATIVE TESTING MATRIX

The 3-Angle Creative Testing Matrix

Never launch with just 1 ad style. Deploy these 3 distinct psychological angles simultaneously:

ANGLE 1: DIRECT PAIN & CONSEQUENCE HOOK

Sample Hook Headline: "Are You Still Burning 40% of Ad Spend on Blind Meta Boosts?"

Psychological Mechanism: Focuses on the immediate financial or operational hemorrhage the buyer is enduring.
Structural Formula: [Immediate Pain Trigger] + [Cost of Inaction] + [Frictionless Alternative]

Copy Script Blueprint:
Hook: If your Meta Ads CPA spiked by 3x this month, your targeting isn't broken—your creative math is.
Body: Most media buyers increase spend hoping the algorithm saves them. Here is the 3-step decision protocol...

ANGLE 2: CONTRARIAN / INDUSTRY MYTH CALLOUT

Sample Hook Headline: "Why 'Targeting Hacks' Won't Save an Ad with Broken Unit Economics"

Psychological Mechanism: Shatters common industry misconceptions to establish immediate founder authority.
Structural Formula: [Debunk Popular Belief] + [Provide Verifiable Math] + [Introduce New Mechanism]

Copy Script Blueprint:
Hook: Stop looking for secret 1% lookalike audiences in 2026. Broad targeting outperforms narrow segments.
Body: The real constraint is whether your margin covers payment gateway fees and acquisition cost...

ANGLE 3: PROOF, MECHANISM & DEMO WALKTHROUGH

Sample Hook Headline: "Inside the Exact Unit Economics Spreadsheet We Use for 7-Figure Audits"

Psychological Mechanism: Appeals to analytical buyers who need tangible evidence before pulling out a card.
Structural Formula: [Show Concrete Deliverable] + [Walk Through 60-Second Demo] + [Offer Instant Access]

Copy Script Blueprint:
Hook: Here is the exact break-even calculator we run before launching any campaign.
Body: It shows your maximum allowable CPA before you lose 1 rupee. Download the plug-and-play template...

MODULE 3 · THE 48-HOUR DECISION MATRIX

The 48-Hour Decision Matrix: Kill, Fix, or Scale

Diagnostic rules to prevent emotional budget changes. Evaluate campaigns after minimum 48 hours & 2,000 impressions:

Symptom: High CPM (Above Rs. 350 in India / Above $35 in US)

Root Cause: Audience too narrow, ad fatigue, or poor engagement ranking from Meta.
Required Action: Switch audience targeting to Broad (Age/Gender/Geo only). Test fresh hook in first 2 seconds.

Symptom: Low Outbound CTR (Below 1.0% on Feeds)

Root Cause: Creative hook or headline is invisible in the feed. People are scrolling past.
Required Action: Do NOT touch landing page or budget. Test 3 new visual hooks with high-contrast text overlays.

Symptom: High CTR (>2.5%) but Low Landing Page Views (<70% of Clicks)

Root Cause: Landing page load speed is too slow (>3 seconds), or mobile bounce friction.
Required Action: Compress images, remove bulky scripts, enable browser caching. Test mobile page speed.

Symptom: High Landing Page Views but Zero Add-to-Cart or Checkouts

Root Cause: Disconnect between ad promise and landing page offer. Price shock or weak proof.
Required Action: Ensure headline on landing page mirrors ad text word-for-word. Add clear FAQs and testimonials.

Symptom: High Checkouts but Failed Payment Conversions

Root Cause: Gateway friction (missing UPI intent, OTP delays, or hidden delivery/GST fees).
Required Action: Audit payment gateway integration. Enable 1-click UPI payments and display transparent pricing.

Symptom: CPA < Target Break-Even CPA & Stable for 72+ Hours

Root Cause: High market resonance & profitable unit economics flywheel.
Required Action: Scale daily budget by +20% every 48 hours. Do NOT double budget overnight (resets machine learning).

MODULE 4 · BUDGET ALLOCATION & SCALING

Scaling Mechanics: Vertical vs. Horizontal Expansion

How top performance marketers scale ad spend without breaking ROAS:

VERTICAL SCALING (+20% RULE)

How it works:
Increase existing winning ad set budget by 15-20% every 48 to 72 hours.

Why it works:
Protects the algorithmic bidding threshold without triggering the 'Learning Phase' reset.

When to stop:
If CPA rises above your Break-Even threshold for 2 consecutive days, roll back to previous budget.

HORIZONTAL SCALING (CREATIVE EXPANSION)

How it works:
Leave winning ads running. Launch fresh campaign testing new visual hooks or alternative audiences.

Why it works:
Expands reach to new pockets of audience without cannibalizing your winning ad set auction bid.

Key Tactics:
• Test new aspect ratios (e.g. 9:16 Reels vs 1:1 Feed)
• Test contrarian copy hooks
• Create Lookalike 1-3% stacks

Daily Campaign Pacing & Audit Cadence

- 09:00 AM — Review previous 24h spend vs budget cap. Ensure pacing is consistent.
- 09:30 AM — Check Event Match Quality in Events Manager. Verify no pixel drops.
- 02:00 PM — Monitor mid-day CTR and CPC. Flag any ads showing >30% CPC spikes.
- 07:00 PM — Calculate Day's Break-Even CPA. Compare actual ROAS vs Target ROAS.
- Weekly Audit — Retire bottom 20% underperforming creatives and replace with fresh tests.

MODULE 5 · FILLABLE CAMPAIGN BLUEPRINT

Campaign Launch Blueprint & Fillable Spec Sheet

Document your campaign parameters before publishing inside Meta Ads Manager:

Campaign Name: _____

Objective: [ ] Sales / Purchases [ ] Leads [ ] Engagement

Product / Offer Selling Price (INR): Rs. _____ COGS / Delivery Cost: Rs. _____

Maximum Allowable Break-Even CPA (from Calculator): Rs. _____

Target Profit ROAS: _____ x (Minimum acceptable return)

Target Audience Geo: _____ Age Range: _____ Gender: [ ] All [ ] M [ ] F

Angle 1 (Pain Hook) Headline: _____

Angle 2 (Contrarian) Headline: _____

Angle 3 (Proof / Demo) Headline: _____

Landing Page URL: https://_____

Daily Budget (INR): Rs. _____ (Recommended initial: 3x to 5x Target CPA)
